PROFILE

Senior Software Engineer with 7+ years building backend and AI-enabled SaaS platforms across marketplaces, payments, e-learning, and talent systems. Strong in service architecture, API design, PostgreSQL performance, event-driven workflows, RAG/LLM integrations, observability, CI/CD, and production reliability. Known for turning ambiguous product goals into scalable systems with measurable gains in latency, throughput, availability, data quality, and engineering velocity.

CORE TECHNICAL SKILLS

Backend & Architecture	Java/Spring Boot, Python/FastAPI, TypeScript/Node.js/NestJS, REST APIs, microservices, distributed services, system design
AI / LLM Systems	RAG workflows, agent integrations, embeddings, NLP pipelines, LLM-backed product features, evaluation-minded AI prototypes
Data & Messaging	PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ, Elasticsearch, schema design, indexing, query optimization
Frontend & Product	React, Next.js, TypeScript, Tailwind CSS, SaaS dashboards, responsive UI, web/mobile API integration
Cloud & Reliability	AWS, GCP, Docker, Jenkins, GitHub Actions, CI/CD, Prometheus, ELK, monitoring, alerting, RCA

SELECTED IMPACT

55% lower p95 search latency | 40% higher matching throughput | 99.9% availability | 90%+ backend test coverage | 147K+ payment transactions | 123K+ users and 321K+ listings supported

PROFESSIONAL EXPERIENCE

Affordable Home Finance - Senior Software Engineer

California, United States, Remote | Oct 2023 - Present

- Re-architected marketplace search and buyer-home matching for 123K+ users and 321K+ listings by splitting ingestion, ranking, AI-assisted trust signals, and read-heavy API paths into Spring Boot services with Kafka-backed listing updates.
- Cut critical search p95 latency by 55% through PostgreSQL execution-plan analysis, composite/partial indexes, join fan-out reduction, query-shape cleanup, Redis caching, and response shaping for web/mobile clients.
- Increased matching throughput by 40% and removed scaling bottlenecks that previously failed near 50 concurrent users, supporting roughly 17K daily searches/API requests on a 100GB PostgreSQL database.
- Built Python/Redis trust-scoring and listing-quality service for ingestion decisions, reducing spam and low-quality listings by 85% while preserving 99.9% availability across marketplace workflows.
- Raised backend test coverage from 60% to 90%+ with CI quality gates, regression suites, TDD practices, code-review standards, and mentoring for junior engineers.

Aladia - Software Engineer / Tech Lead

Brescia, Lombardy, Italy, Remote | Sep 2020 - Sep 2023

- Architected production Stripe payment workflows for an e-learning SaaS platform processing 147K+ transactions, including one-time payments, subscriptions, coupons, idempotent APIs, webhooks, reconciliation, and auditability.
- Led backend and partner/admin dashboard architecture, translating product, security, and compliance requirements into versioned API contracts, QA plans, acceptance criteria, and implementation reviews.
- Resolved a recurring-billing/tax defect causing incorrect overcharges after long subscription periods, improving financial correctness across payment retries, renewals, and edge cases.
- Reduced incident MTTR by 30% by standardizing Prometheus monitoring, ELK logging, dashboards, alert rules, correlation IDs, and root-cause-analysis workflows across distributed services.
- Supported high-velocity releases in an environment averaging 30+ merged PRs/day using Docker/Jenkins CI/CD, build validation, deployment checks, rollback discipline, and release-health monitoring.

Mereb Technologies - Software Engineer

Addis Ababa, Ethiopia | May 2017 - Aug 2020

- Built and shipped a SaaS talent-matching platform that onboarded 5K+ technology professionals across Node.js, React, REST APIs, reusable domain models, and admin/client/talent portals.
- Improved matching and filtering workflows using segment-tree based filtering and bottom-up dynamic programming to improve scalability and relevance for professional discovery use cases.
- Hardened authentication and authorization across three portals with OAuth 2.0, RBAC, secure session flows, and explicit permission boundaries.
- Resolved 200+ production/customer-facing issues within SLA while maintaining 98% customer satisfaction and strengthening operational support quality.

SELECTED TECHNICAL WORK

- AI / SaaS Automation Platform:** Built production-style prototypes with authentication, multi-tenant data models, background jobs, RAG/agent workflows, API boundaries, cloud deployment, and observability-ready backend architecture.
- Amharic NLP Sentiment Analysis:** Developed Python/TensorFlow pipeline for low-resource Amharic sentiment classification, covering preprocessing, tokenization, model training, evaluation, and experimentation.

EDUCATION

Addis Ababa University - Bachelor of Software Engineering, Graduate with Distinction | GPA: 3.9/4.0 | 2013 - 2017 | Languages: English, Amharic
